

“Web-based visualization and corpus management for language modeling”

### Week 3 Report

On November 24, we had an internal meeting to finalize the final version of the requirement document. We discussed and analyzed each requirement carefully. After spending good time on it, we finally categorized each requirement as a functional/non-functional. On November 25, our group leader met the customer and after analyzing the final version of requirement document, customer had signed it. On November 26, we have uploaded the requirement document on the redmine. We have started to draft the core use case on the basis of the requirement document.
